

Searching

The NSHD metadata can be searched by keyword, year of collection or category, or a combination of all three search types, including:

- Search by keyword (including variable name and description)
- Search by year of collection
- Search by category
- Search by keyword and year
- Search by keyword and category
- Search by year and category
- Search by keyword, year and category

Search by keyword

To search by keyword, you enter a search term, which will be matched against a variable name and description. You can also perform a soundex search on the term by checking the relevant box. Note that there is a maximum of 60 characters in the search term box.

Level 2 Access - Search

Keyword: * ☐ Soundex?

* Maximum 60 characters for search term

[Problems?](#) [Contact LHA](#)

When the Search button is clicked, the results are displayed as shown below:

Level 2 Access - Search Results

Multiple Add				
Variable	Description	Year	Add to Basket?	Multiple Add?
WKST72	present WorkStage	1972	+	☐
MP33	i feel i am tougher than most people of my age	1959	+	☐
DIV	age at DiVorce - aggregate groups	1972	+	☐
MAM	Mother's Age at Marriage	1960	+	☐
MAM	Mother's Age at Marriage in years	1961	+	☐
MAN50	Mother's MANagement and understanding of child compared with others in H.V.'s care 1950 (not cleanliness of child or home)	1950	+	☐
DWED50	age of DWELLing	1950	+	☐
MOM	Mother's Occupation before Marriage	1954	+	☐
LEAVP62	age Pupil expects to LEAVe school	1962	+	☐
CH72	No, in survey member's family aged 5 years but less than 15 years old living in the household	1972	+	☐
CHB72	Members of household (not survey member's family) aged 5 years but less than 15 year ol living in the household	1972	+	☐
ILL1	diagnosis age period 0-60 mths	1972	+	☐
ILL2	diagnosis age period 61-131 mths	1972	+	☐
ILL3	diagnosis age period 132-180 mths	1972	+	☐

The variable name, description and year of collection are displayed. The order of display is based on two factors: frequency on variable occurrence in all previous shopping baskets (from all users), and year of collection.

You are also given the option of adding a variable to the shopping basket by clicking the + symbol next to each variable, or adding a group of variables by checking the checkbox next to each desired variable, and then clicking the **Multiple Add** button.

To see variable metadata for each variable, click on the hyperlinked variable name:

Level 2 Access - Variable Metadata

Variable Metadata

Name	WKST72
Description	present WorkSTage
Year	1972
Form	1972B
Question Number	14a,b/15a,b

[Add to basket](#)

Repository Details

[Problems?](#) [Contact LHA](#)

Here, the name, description, year of collection, form number and question number are displayed, along with the physical reference to the variable in the data repository.

In addition, most variables will also display the value labels for each variable, as shown below for the variable DIV:

Value Labels

Value	Label
00	Unbroken
01	4 2/12 or earlier
02	4 3/12 - 6 2/12
03	6 3/12 - 8 6/12
04	8 7/12 - 10 9/12
05	10 10/12 - 12 11/12
06	13 - 14 11/12
07	15 - 19 11/12
08	20 - 26
09	Not known
10	[3 cases - no label]
11	Broken by death

Also, a set of the most related variables are displayed on the screen as well. Relatedness is measures by the frequency of co-occurrence of the target variables

and all other variables from all previous shopping baskets (from all users). An example is shown below for DIV:

Related variables:

Variable
<u>SEX</u>
<u>INF</u>
<u>VOC8R54</u>
<u>PI8R54</u>
<u>CROW50</u>
<u>SC8R54</u>

If the variable is a derived variable, then additional details of how the derivation was made will be displayed. The following example shows the input variables for BMI72U, as well as full details of the SPSS script used to create the variable, descriptive statistics etc

Search by category

The NSHD is internally categorised according to 27 categories, including:

- 1 Contact
- 2 Anthropometry
- 3 General health
- 4 Wellbeing
- 5 Respiratory health
- 6 Cardiovascular health
- 7 Musculoskeletal health & physical capability
- 8 Mental health
- 9 Womens health
- 10 Hospital admissions
- 11 Medication
- 12 Other health care
- 13 Mortality
- 14 Cognitive function
- 15 Temperament/personality
- 16 Nutrition
- 17 Other health behaviours
- 18 Puberty/fertility history
- 19 Marital history
- 20 Household structure
- 21 Education
- 22 Social class
- 23 Employment history
- 24 Other socioeconomic circumstances
- 25 Social support/life events
- 26 DNA samples
- 27 Blood and urine samples

Each variable in the study may be associated with one or more categories, and it is possible to retrieve a list of all variables in each category as shown below:
